

Thermolastic®

ADVANTAGES OF CHOOSING THERMOLASTIC®

- + Proven durability over 10 years with more than 250,000 installations worldwide
- + Weatherproof and resistant to road debris
- + Fully adaptable - it will suit most exhaust pipe configurations
- + Suitable for end-user installation
- + Wrap-type installation makes Thermolastic® especially suited to retro-fit application directly on the vehicle
- + Can be used for product prototyping and smaller OEM production runs
- + In-house wrapping service available in UK, Germany, Italy and USA.

THE MOST VERSATILE FLEXIBLE EXHAUST PIPE INSULATION SYSTEM

Thermolastic® is a flexible thermal insulation wrap system that is primarily used on exhaust down pipes in diesel powered vehicles with emission control systems.

Thermolastic® insulation is uniquely designed to increase the efficiency of SCR and/or DPF units, by capturing the heat generated by the exhaust gas and conserving it within the product layers. It can also be used as a heat shield for health and safety purposes or for protection to near by vulnerable components.

When correctly fitted, the **Thermolastic®** system will be fully resistant to the ingress of water, fuel oil, salt spray and solvents.
